

Brew & Bean seeded simulation

inconclusive: required evidence was missing, invalid, or incomplete within measured coverage - this is not a pass

1 issue found / Scan partial

Run summary

Run finished Aug 29, 2026, 5:50 PM

Testers	Product issues	Confirmed	Unfinished checks
1	1	1	1

What to do next

- FIX BEFORE RELEASE**

The page layout blocked progress

The verified behavior blocks or breaks a measured customer journey.
- COMPLETE VERIFICATION**

Contract exercised check could not be verified

Without complete evidence, this check cannot support a reliable release decision.

Measured scope

Journeys run	Recorded actions	Verified traces	Routes remaining
1/3	3	1	6

frontier NOT exhausted: discovery stopped early because the probe budget was exhausted under current policy

Product issues and unfinished checks

ISSUE 1 / EVIDENCE-BACKED BLOCKER WITHIN MEASURED COVERAGE / HIGH

The page layout blocked progress

WHAT HAPPENED

Clipped, collapsed, or broken elements obstructed the journey.

WHY IT MATTERS

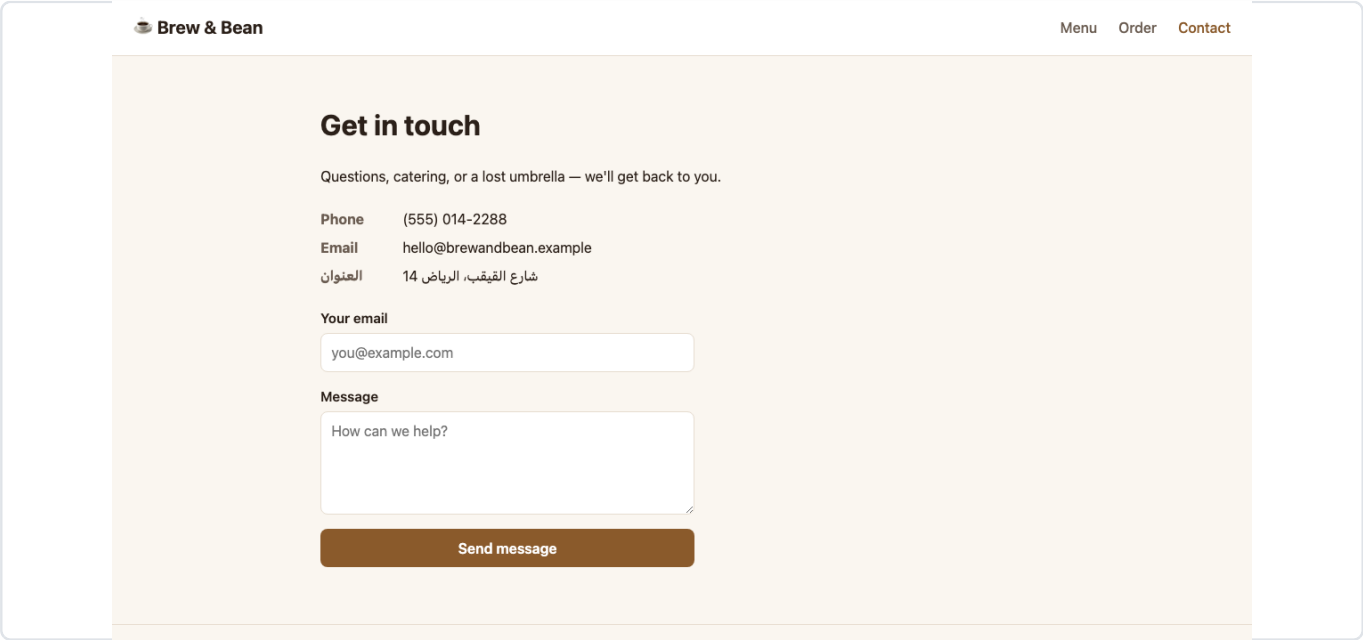

The verified behavior blocks or breaks a measured customer journey.

NEXT STEP

Address the behavior shown below and use the numbered evidence steps as acceptance criteria.

RECORDED STEPS

- 1 Select Order.
- 2 Select Contact.

ISSUE 2 / UNRESOLVED CHECK / EVIDENCE GAP / CRITICAL

Contract exercised check could not be verified

WHAT HAPPENED

The recorded evidence was incomplete, so Mirage left this check unresolved instead of classifying it as a product issue.

WHY IT MATTERS

Without complete evidence, this check cannot support a reliable release decision.

NEXT STEP

Review the remaining capture limitation; do not classify this as a product issue until complete evidence exists.

RECORDED STEPS

- 1 Select Order.
- 2 Select Contact.
- 3 Enter "Please call me back." in Message.

How to read this report

Limitations

- This was a black-box interaction run. Mirage evaluated rendered behavior and recorded responses; it did not inspect the target's source code.
 - Measured coverage describes only the journeys and evidence recorded in this run. It is not a claim that every page, control, state, or user path was reached.
 - The run did not meet its required journey-coverage envelope.
 - 6 discovery hypotheses remained outside the exercised journey set.
 - The product-surface map recorded 1/3 screens, 1/25 controls, and 1/25 paths attempted.
 - Remaining work is reported separately: 3 screens (0 blocked 2 deferred 1 unresolved); 25 controls (0 blocked 24 deferred 1 unresolved); 25 paths (0 blocked 24 deferred 1 unresolved).
 - See the downloadable product-surface coverage details for item-level reasons and evidence.
 - Discovery stopped with reason: budget exhausted.
 - The measurement harness reported failed health.
 - At least one objective check remained unresolved because required evidence was incomplete or not evaluable.
 - AI-judge observations are included in an advisory appendix and do not independently determine the verdict.
-

Additional observations

deterministic fixture

The bounded scripted trajectory was captured for offline validation.

Technical record

Engine: mirage 0.1.0 / Mode: mock / Report verification: verified

Offline simulation non-verdict. This run used Mirage's deterministic mock substrate. It demonstrates report behavior and cannot establish a product outcome.

Release provenance unavailable. No registration with the same target reference and execution substrate was available to support a release-identity statement.

This report summarizes a black-box scan. Internal hashes and implementation identifiers are intentionally omitted from the customer copy.
